Twitter integration

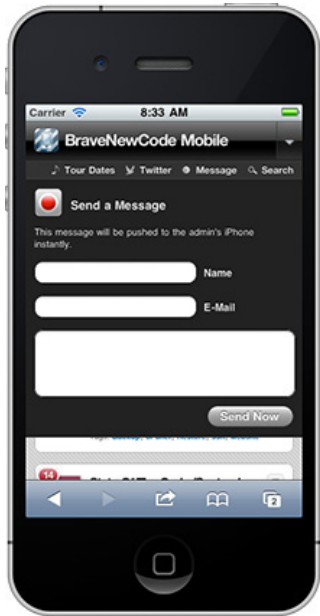

IPHONEtouch automatically transforms your blog into an iPhone application-style theme, complete with ajax loading articles and effects, when viewed from an iPhone, iPod touch, Android, Opera Mini, Palm Pre, Samsung touch and BlackBerry Storm/Torch mobile devices.

The admin panel allows you to customize many aspects of its appearance, and deliver a fast, user-friendly and stylish version of your site to iPhone, iPod touch, Android, Palm Pre, Samsung touch and BlackBerry Storm/Torch visitors, without modifying a single bit of code (or affecting) your regular desktop theme.

The theme also includes the ability for visitors to switch between IPHONEtouch view and your site's regular theme.
